NEW PRODUCTS

INSERT TYPE DRILLING

A cutting tool for drilling holes that uses a special insert which can be indexed or replaced when the cutting edge becomes dull.

Cycle time reduction will vary according to drilling conditions.

Chip breaker: Protrusion or groove on the insert designed to split chips created while drilling.

PCD THREAD MILLING CUTTERS

COMPANY GROWTH STRATEGY

Rebounces in the global business economy during the last years has changed the dynamic state of the Indian manufacturers. The common question is "How to sustain in the continually changing global markets?".

Over the years, KJK has bypassed many hurdles to reach the International market. Even during the time of recessions and global melt downs, KJK is moving ahead, investing huge amounts in installing latest CNC machines, latest technologies and quality oriented and highly capable manpower, to offer zero defect Hi-Q products to all our customers.

Thirty years ago, KJK opened its first production unit in Chennai and now at OMR, is one of the largest private limited company in the tooling sector and expanded its capacity to supply PCD / CBN / Carbide tools to the National and International markets.

KJK is always moving ahead with its high thoughts and innovative ideas in the production of Hi-Q Tools for the best of the best industries around the world.

The journey of development at KJK is continuing forever ...
